(54) **Method for making disposable wipe-out device**

(57) A method for making a disposable wipe-out device having a plurality of brushy pieces planted onto a basic sheet. A continuous second web for the brushy pieces comprising heat-sealable filaments is placed on a continuous first web for the basic sheet comprising heat-sealable nonwoven fabric or plastic film and then these webs are heat-sealed together along heat-seal

lines extending transversely of these webs and intermittently arranged longitudinally of these webs to form a continuous composite third web. The second web is cut along a middle line extending parallel to and between each pair of adjacent heat-seal lines followed by cutting the first web to obtain individual disposable wipe-out devices.
